

Margin Coverage Option (MCO)

Area-based coverage against an unexpected decrease in operating margin due to reduced county yields, reduced commodity prices or increased input costs.

What is MCO?

Growers often face yield, commodity price, as well as input cost uncertainty. While many MPCl products provide coverage for yield and/or price losses, MCO uniquely helps producers manage certain input cost fluctuations as well. As a supplemental endorsement, MCO adds a band of coverage from 90% up to 95%, that aligns with a grower's underlying yield or revenue-based individual policy.

When are Indemnities Triggered?

An indemnity payment occurs when the harvest margin for the county is lower than the trigger margin due to a decrease in revenue and/or an increase in input costs. Because MCO is area-based, losses may not reflect a grower's individual yield or input cost experience on their operation.

MCO and Other Programs

- ✓ MCO endorsement must be attached to an RP, RP-HPE, YP or APH underlying policy.
- ✓ MCO can be added to STAX-insured acreage. Since the lower end of the coverage range for MCO is 90 percent, there is no overlap with STAX.
- ✓ A gap in coverage is allowed between the underlying policy and MCO's 90% lower threshold.
- ✗ MCO cannot be elected with an Area Risk Protection Insurance policy.
- ✗ ECO & HIP-WI cannot be elected on the same underlying policy as MCO.

Determining Margin

Margin is determined by subtracting input costs from revenue, the following inputs are included:

- Diesel
- Natural Gas
- Diammonium Phosphate
- Potash
- Urea*

*Not included as an input on soybean crops.

Coverage Options

- 1 Band of Coverage from 90%-95%
- 2 Select a payment factor of .50 to 1.00

Indemnity Example: Insured Scenario

Approved yield: 181 bu

Acres: 500 (at same coverage level, type, and practice in county)

Share Percent: 100

Expected area yield: 180 bu

Final Area Yield: 165 bu

Trigger Level: 95% (5% coverage range)

Coverage Percent: 100%

Margin Projected Price: \$6.00 per bu

Margin Harvest Price: \$6.25 per bushel

Projected Cost: \$182.70 per acre

Harvest Cost: \$205.57

Below is how MCO coverages and indemnities would be calculated based on the underlying policy.

RP UNDERLYING POLICY	RP-HPE UNDERLYING POLICY:	YP UNDERLYING POLICY:
Expected Margin: \$1,125.00 - \$182.70 = \$942.30 per acre Trigger Margin: \$942.30 - (\$1,125.00 × (1.00 - 0.95)) = \$886.05 per acre MCO Protection: 181 bu. × \$6.25 × 500 acres × 0.05 × 1.00 (Coverage Percent) × 1.00 (Share) = \$28,281 Harvest Area Revenue: 165 bu.
